1897

ILLUSTRATIONS.

PLATE	FACING PAGE
I. View of Model of the State of Maryland.....	23
II. The Potomac River Valley at Williamsport, on the Western Maryland Railroad	64
III. View of the Great Valley from Blue Mountain, on the Western Maryland Railroad	104
IV. Map showing Atlas Sheets and Charts in Maryland.....	114
V. Map showing leading Triangulation in Maryland	122
VI. Hypsometric Map of Maryland	142
VII. View showing Estuary of the Chesapeake Bay near Queenstown.....	146
VIII. The Falls of the Potomac.....	148
IX. View of the Yonghiogheny Valley in the Alleghany Mountains, on the Baltimore and Ohio Railroad	152
X. The Gorge of the Potomac at Harper's Ferry looking east, on the Baltimore and Ohio Railroad.....	176
XI. Folded Strata of Lewistown Formation at Hancock, on the Baltimore and Ohio Railroad	182
XII. View of "Devil's Backbone" in Lewistown Formation north of Cumberland, on the Baltimore and Ohio Railroad	186
XIII. Geological Map of Maryland	204
XIV. Isogonic Map of Maryland	404
XV. Instruments used in Magnetic Observations	450
XVI. Map showing the Preliminary Lines of Equal Magnetic Inclination and the Preliminary Lines of Equal Horizontal Force for Maryland on January 1, 1897	493
XVII. Map showing the Lines of Equal Magnetic Declination for Maryland in the years 1700 and 1800	494

ILLUSTRATIONS

PLATE	FACING PAGE
I. The Potomac River near Cherry Run, at the Junction of the Baltimore and Ohio and Western Maryland Railroads.....	27
II. Lake Roland near Hollins Station, on the Northern Central Railway.....	32
III. Happy Valley near Port Deposit, on Pennsylvania Railroad System,	38
IV. Fig. 1.—Horizontal Beds.....	56
“ 2.—Prominent “bedding” Joints in Granite.....	56
V. “ 1.—Quarry showing Several Series of Joints.....	62
“ 2.—Glacial Stripped Quarry.....	62
VI. Fragments of Cubes after Crushing.....	100
VII. Map showing the Distribution of the Granites, Gneisses, and Allied Rocks in Maryland.....	126
VIII. Foliated Granite. Port Deposit, Cecil County.....	130
IX. Fig. 1.—Photomicrograph of Granite, Port Deposit.....	138
“ 2.—Photomicrograph of Granite, Ellicott City.....	138
X. McClanahan Granite Quarry, Port Deposit.....	142
XI. Granite-Porphry. Ellicott City, Howard County.....	146
XII. Fig. 1.—Gaither's Quarry, Ellicott City.....	148
“ 2.—Weber's Quarry, Ellicott City.....	148
XIII. Granite. Waltersville, Baltimore County.....	150
XIV. Fig. 1.—Weller's Quarry, Granite.....	152
“ 2.—Guilford and Waltersville Quarry, Granite.....	152
XV. Detailed View, Weller's Quarry, Granite.....	154
XVI. Fine-grained Granite. Guilford, Howard County.....	158
XVII. Fig. 1.—Photomicrograph of Granite, Granite.....	162
“ 2.—Photomicrograph of Gneiss, Baltimore.....	162
XVIII. “ 1.—Curley-Schwln Quarry. Baltimore.....	166
“ 2.—“Edmondson Avenue” Quarry. Baltimore.....	166
XIX. Map showing the Distribution of the Marbles in Maryland.....	170
XX. Beaver Dam Quarry. Cockeysville.....	174
XXI. Marble. Cockeysville, Baltimore County.....	178
XXII. Fig. 1.—Thirty-eight ton Monolith. Cockeysville.....	182
“ 2.—Potomac Marble Quarry, Point of Rocks.....	182
XXIII. Potomac Marble. Point of Rocks, Frederick County.....	188
XXIV. Fig. 1.—Whiteford Quarry. Cambria.....	192
“ 2.—Slate Quarry. Ijamsville.....	192
XXV. Serpentine. Broad Creek, Harford County.....	196
XXVI. Map showing the Distribution of the Paleozoic Limestones in Maryland.....	198
XXVII. Red Sandstone. Seneca, Montgomery County.....	200
XXVIII. Fig. 1.—Sandstone Quarry, Emmitsburg.....	204
“ 2.—Sandstone Quarry. Seneca.....	204

PLATE	FACING PAGE
XXIX. Fig. 1.—Monocacy Aqueduct of White Quartzite from Belt's Quarry,	208
“ 2.—Sandstone Quarry. Point of Rocks	208
XXX. Map showing the Distribution of the Sandstones and Quartzites in Maryland.....	212
XXXI. Fig. 1.—Proctor Brothers' Quarry. Cambria.....	216
“ 2.—“Peachbottom”-Excelsior-Peerless Quarry. Cambria....	216
XXXII. “ 1.—York and Peachbottom Quarry. Cambria	226
“ 2.—York and Peachbottom Quarry. Cambria.....	226
XXXIII. Diagram of Control of the Frostburg Sheet.....	248
XXXIV. Diagram of Triangulation of the Frostburg Sheet.....	252
XXXV. Astronomical Transit and Zenith Telescope.....	258
XXXVI. Y-Level.....	268
XXXVII. Piedmont Plateau looking East from Rocky Ridge	276
XXXVIII. Fig. 1.—Heliotrope.....	286
“ 2.—Traverse Plane-table Alidades.....	286
XXXIX. Eight-inch Theodolite	292
XL. Patapsco Valley from Woodstock College, on Baltimore and Ohio Railroad.....	308
XLI. Johnson Plane-table.....	316
XLII. Telescopic Alidade.....	320
XLIII. Smith's Map, 1608 (reduced).....	350
XLIV. Calvert Cliffs, on the Chesapeake Bay.....	356
XLV. Farrer's Map, 1651.....	364
XLVI. Herman's Map of Maryland (reduced).....	378
XLVII. Bohemia River from Elk Neck at Head of Chesapeake Bay.....	384
XLVIII. Map showing Appalachian Topography by U. S. Geological Survey,	454

FIGURE	PAGE
1. Ideal Figure showing Structures of the Earth's Crust (after U. S. G. S.)...	48
2. Generalized Section from Sugar Loaf Mountain to North Mountain.....	49
3. Folded Rocks (after Van Hise).....	51
4. Quarry in Horizontal Rocks	53
5. Diagram showing Relation between Thickness and Exposure in Beds.....	54
6. Section Across Western Maryland showing Restored Folds.....	59
7. Ingersoll-Sergeant Steam Drill.....	71
8. Ingersoll-Sergeant Quarry Bar Drill.....	72
9. Wardwell Channelling Machine.....	73
10. Ingersoll-Sergeant Channelling Machine	74
11. Revolving Drum for Derrick	75
12. Lincoln Stone Planer	76
13. Stone Polisher.....	78
14. Photomicrograph of Seneca Sandstone (magnified ten diameters).....	97
15. Cube for Crushing Tests.....	112
16. Bar for Expansion Tests.....	115
17. Bar for Elasticity Tests.....	116
18. Bar for Sheaving Tests.....	117
19. Sketch Map of Peach Bottom Slate Area.....	221
20. Baldwin Base-Measuring Device.....	282
21. Signal	289

ILLUSTRATIONS

<i>Plate</i>	<i>Facing Page</i>
1. General map showing the areas described in this volume.....	34
II. Fig. 1.—Flowage folds in Baltimore gneiss, one-half mile east of Alberston.....	46
Fig. 2.—Shear fold in isoclinally-folded ribbon gneiss. A strong cleavage parallels the axial plane and dips gently north. South- east bay of Lake Roland.....	46
III. Fig. 1.—Combination of flow and shear folds in Baltimore gneiss....	50
Fig. 2.—Fracture cleavage in Wissahickon schist, seven miles north of Conowingo Dam, east side of Susquehanna River.....	50
IV. Fig. 1.—Flow cleavage transecting bedding in Vintage Dolomite. Burnt Mills, Pennsylvania.....	56
Fig. 2.—Flow cleavage in fan-like arrangement.....	56
V. Fig. 1.—Cleavage transecting bedding in Setters Formation, one- half mile northeast of Notch Cliff.....	60
Fig. 2.—Weathered Setters Quartzite showing vertical bedding, crossed by nearly horizontal fracture cleavage. Long Green Creek.....	60
VI. Figs. 1 + 2.—Photomicrographs of fracture cleavage in Wissahickon Schist, Prettyboy Dam.....	66
VII. Fig. 1.—Aligned blebs in volcanic rocks of Frederick County, Maryland.....	70
Fig. 2.—Elongated components in conglomerate of Conestoga Lime- stone, transected by cross fracture, Burnt Mills, Pennsylvania..	70
VIII. Fig. 1.—Linear stretching in Setters quartzite, transected by cross fractures. Quarry on east side of Brice Run, north limb of Jew Bottom Anticline.....	74
Fig. 2.—Shear fractures produced artificially in clay.....	74
IX. Fig. 1.—Photomicrograph of Antietam mica schist. Same section as Figs. 10-13 (Statistical diagrams). Road three miles north from Martieville, Pennsylvania.....	90
Fig. 2.—Oriented specimen used for statistical diagram in Figs. 10-13.....	90
X. Fig. 1.—Altered feldspar (center) in Port Deposit granodiorite. Photomicrograph $\times 13$	116
Fig. 2.—Cataclastic structure in hornblende granodiorite. Photo- micrograph $\times 10$	116
XI. Inclusions and intrusive relationships on islands south-east of Cono- wingo Dam on the east side of the Susquehanna River.....	118
XII. Fig. 1.—Amphibole from an inclusion south of Conowingo Dam. Large central crystal with three stages of alteration from pyroxene to amphibole. Photomicrograph $\times 50$	120
Fig. 2.—Calcite-chlorite-quartz schist from an inclusion south of Conowingo Dam. Photomicrograph $\times 31$	122

<i>Plate</i>	<i>Facing Page</i>
XIII. Fig. 1.—Quartzite from an inclusion south of Conowingo Dam. Photomicrograph $\times 30$	130
Fig. 2.—Conglomerate from an inclusion south of Conowingo Dam. Photomicrograph $\times 12$	130
XIV. Fig. 1.—Gabbro inclusions in granodiorite one and a half miles south of Darlington on Deer Creek.....	134
Fig. 2.—Schist inclusions in quartz diorite below Conowingo Dam. Note fold in upper left. Scale—white object $2\frac{1}{4}$ inches.....	134
XV. Fig. 1.—Bedding, folding, flow cleavage, and fracture cleavage in the Glenarm series north of Conowingo Dam on the east side of the Susquehanna River.....	136
Fig. 2.—Foliation in Port Deposit granodiorite and displacement of an inclusion by movement along a cross joint. Port Deposit quarry.....	136
XVI. Fig. 1.—Flow lines in Port Deposit granodiorite. Dark patches are aggregates of biotite. Port Deposit quarry.....	138
Fig. 2.—Lense of granodiorite following cleavage and quartz dike cut and displaced by flow cleavage in schist one mile south of Darlington. Scale—white object $2\frac{1}{4}$ inches.....	138
XVII. Joint map of the Port Deposit granite quarry with joint strike diagram representing 850 joints.....	140
XVIII. Fig. 1.—Longitudinal joints facing reader, regional tension joints and cross joints normal to them in the Port Deposit quarry.....	142
Fig. 2.—Gently dipping cross joints in the Susquehanna River bed south of Conowingo Dam.....	142
XIX. Fig. 1.—Contact between gabbro and granodiorite one-half mile south of Lapidum, looking down on cross joints. White scale equals 6 inches.....	144
Fig. 2.—Quartz dike parallel to bedding, both at an angle to foliation and displaced along foliation plane in schist one mile south of Darlington. Bedding exhibited by quartz pebbles seen just below white object. White object $2\frac{1}{4}$ inches.....	144
XX. Regional Foliation Map of the Port Deposit Granodiorite complex and its wall rocks.....	In pocket
XXI. Regional Joint Map of the Port Deposit Granodiorite complex and its wall rocks.....	In pocket
XXII. Fig. 1.—Fault breccia from Lake Roland, northwest of Baltimore. Photomicrograph.....	160
Fig. 2.—Foliation and gently dipping axes of folding in Baltimore gneiss. North Charles Street, one and a quarter miles southeast of Ruxton.....	160
XXIII. Fig. 1.—Cross joints intersecting linear structures at an angle of 90° , Western Maryland Railroad cut at Lyons Mill Road.....	168
Fig. 2.—Crinkled Setters schist showing axes (parallel to hammer handle) pitching gently west. Long Green Creek.....	168
XXIV. Fig. 1.—Large isoclinal fold of Setters quartzite pitching gently west. Hammer handle parallels the axis of the fold; arrows in chalk indicate linear grooving. One and a quarter mile northeast of Marriottsville, Maryland.....	174

Plate	Facing Page
XXXV. Structure map of the area of volcanic rocks in Cecil County, Maryland.....	In pocket
XXXVI. Fig. 1.—Foliation cutting bands in the Baltimore gneiss. South bluff of Lake Roland.....	220
Fig. 2.—Feathery serpentine, natural scale. One mile north of Union Dam.....	220
XXXVII. Fig. 1a.—Specimen of chloritized amphibolite. Patapsco River southeast of Hollofield.....	222
Fig. 1b.—Honeycomb ironstone with residual serpentine. Cedar Branch. Natural size.....	222
Fig. 2.—Gabbro pegmatite north of Union Dam.....	222
XXXVIII. Fig. 1.—Thin acid bands in amphibolite. Patapsco River one mile southeast of Hollofield.....	224
Fig. 2.—Joints refracted by banding. Baltimore and Ohio Railroad, south of Hollofield.....	224
XXXIX. Fig. 1.—Banded ultrabasics. Northeast of Western Maryland Railroad and Gwynns Falls Parkway.....	228
Fig. 2.—Schistose zone in gabbro. Western Maryland Railroad at Sudbrook Park.....	228
XL. Fig. 1.—Sharply folded linear foliation of amphibolite. Specimen from south of Union Dam, Baltimore County. Natural size.....	230
Fig. 2.—Cross jointing. Patapsco River, one mile southeast of Hollofield.....	230
XLI. Geologic map of the area underlain by the Baltimore gabbro showing the distribution of primary and secondary structures.....	In pocket
XLII. Fig. 1.—The canal west of Summit Bridge, Delaware, before the recent dredging operations.....	244
Fig. 2.—The canal east of Summit Bridge, Delaware, during the recent dredging operations.....	244
XLIII. Fig. 1.—The Pleistocene overlying the Raritan formation 1200 feet east of Chesapeake City bridge. Station 76 + 400 N.....	266
Fig. 2.— <i>Halymenites major</i> in Englishtown sand 50 feet east of the Philadelphia, Baltimore, and Washington Railroad bridge. Station 45 + 280 S.....	266
XLIV. Fig. 1.—The Englishtown-Marshalltown contact at station 52 + 150 S. The Englishtown contains <i>Halymenites major</i>	268
Fig. 2.— <i>Halymenites major</i> in Englishtown sand at above station... ..	268
XLV. Fig. 1.—The irregular contact between the Magothy formation and the Crosswicks clay, one mile west of Summit Bridge at station 57 + 480 N.....	270
Fig. 2.—The Englishtown-Marshalltown contact 100 feet west of the Philadelphia, Baltimore, and Washington Railroad bridge. Station 45 + 450 S.....	270
XLVI. Section A. Bank of canal approximately 1600 feet east of Maryland-Delaware line (between stations 66 + 375 and 66 + 225). ..	276
Section B. Bank of canal approximately 2000 feet west of Summit Bridge (between stations 54 + 450 and 54 + 050) ..	276
Section C. Bank of canal approximately one and a half miles west of St. Georges Bridge (between stations 36 + 775 and 36 + 665) ..	276
Section D. Bank of canal approximately one-quarter mile east of St. Georges Bridge (between stations 28 + 865 and 28 + 735) ..	276

<i>Figure</i>	<i>Page</i>
1. Schematic block diagram showing the elements of a fold.....	52
2. Diagram of a fold which is located in a coordinate system of three axes.....	54
3. Diagram showing a bent fold. Note consistent thickness of bedding with reference to a center of curvature. Half arrows indicate relative direction of slippage. Full arrows indicate areas of tension and compression within the crest of the fold.....	56
4. Diagram of a shear fold which is the result of slippage on subparallel planes in the direction of the arrows.....	57
5. Diagram showing the relation between cleavage and bedding in a fold.....	65
6. Diagram showing axial plane cleavage in a shear fold.....	66
7. Folded quartz veins in Wissahickon schist. Susquehanna River section.....	67
8. Combination of bedding, flow cleavage, and fracture cleavage. (Diagram).....	68
9. Bedding in Conestoga limestone almost obliterated by slippage along cleavage planes. Burnt Mills, Pennsylvania. Height of the exposure 10 feet.....	71
10-13. Statistical diagrams of mineral orientations in Antietam schist.....	90
10. Orientation of biotite cleavage, 200 grains. Contours: 1-2-3-4-5-6-8-10-12 per cent. Solid black area from 12-17 per cent.....	90
11. Orientation of muscovite cleavage. 300 grains. Contours: 1-2-3-4-5-6-7-8-9-10 per cent.....	90
12. Orientation of inclusions in albite crystals. 160 inclusions. Contours: 2-4-6-8-10-12-14-16-18 per cent and over. Solid black over 18 per cent.....	90
13. Orientation of quartz axes (c). 200 grains. Contours: 1-1½-2-3-3½ per cent. Black area over 3½ per cent.....	90
14. Diagram showing directions of joints in Setters quartzite.....	96
15. The same joints shown in a projection of their poles in a spherical equal area net.....	96
16. Sketch showing displacement of quartz dikes and joint along regional tension joints. Displacements average two inches. Small closely spaced joints. Length of N-line equal 2 feet.....	141
17. Trend of the anticlinal axes of Baltimore gneiss domes in Maryland..	154
18. Diagram showing obliteration of the unconformity along the flanks of domes and the types of folding.....	162
19-26 Statistical diagrams of the direction of jointing	
19. Joints in Baltimore gneiss. Malvern Avenue, near Ruxton.....	171
20. Joints in Baltimore gneiss at Cromwell Bridge.....	171
21. Joints in Baltimore gneiss in the Stone quarry at Falls Road.....	172
22. Joints in Baltimore gneiss. Gwynns Falls and Hilton quarries....	172
23. Joints in Setters quartzite. Quarry one-quarter mile east of Tobin.	177
24. Joints in quartzite. Waters quarry.....	177
25. Joints in quartzite. Rustie quarry.....	177
26. Joints in quartzite quarry at Cromwell Bridge.....	177
27. Structural elements in folded ribbon gneiss near Clarksville. The horizontal plane is a cross joint.....	179

<i>Figure</i>	<i>Page</i>
28. Contact of amphibolite (G) with amphibolite schist (A). Forest Park Avenue at Hillsdale.....	222
29. Section of mixed Wissahickon schist (W) and amphibolite (A). Pennsylvania Railroad at Mount Washington.....	228
30. Amphibolite (G) in Wissahickon schist (W). Baltimore and Ohio Railroad south of Hollofield.....	229
31. Relation of secondary structure to banding, one mile southeast of Hollofield.....	230
32. Belt of Upper Cretaceous outcrops in the Chesapeake and Delaware Canal Region.....	243
33. Section accompanying Plate XLIII, Fig. 1.....	266
34. Section accompanying Plate XLIII, Fig. 2.....	266
35. Section accompanying Plate XLIV, Fig. 1.....	268
36. Section accompanying Plate XLV, Fig. 2.....	268
37. Index map showing location of sections along the canal.....	275
