The yachts *Flossie* and *Nepenthe*, of the Baltimore Yacht Club, stopped at Annap- olls.

Jerry L. Smith, of Annapolis, having passed the required examination, was ad- mitted to practice in the Anne Arundel Court.

By the influence of Gen. H. Kyd Doug- las, Jack Heyser, of Hagerstown, was ap- pointed electrician on board the Vermont, Brooklyn navy yard.

At Bethesda, in Montgomery county, Mr. Alfred Wilson and three other mem- bers of his family were made violently ill by something they had eaten, probably canned vegetables. They were in a very serious way, but are now considered out of danger.

The Frostburg (Md.) Mining Journal says the war has not only increased the price of coal, but that "the selling price of coal for 1898 is the lowest ever reached in this country." The Journal adds: "The gov- ernment is making some purchases, but these are more than counterbalanced by the loss of trade in other directions."

A New Mineral Pitch.

Engineering News says: "Maujak" is a material found in Barbadoes. It is of a brilliant black color and is deposited in beds from ten inches to two feet thick, immediately below the general surface. It is believed to be a solidified petroleum, and in composition it is analogous to the Trinity Island tar and to the gilsonite of Utah and the albertite of Canada. But it is distinguished by its good qualities. Ac- cording to Wallman's *Vers. Zeitung*, the best samples contain: Water, 2 per cent.; volatile organic substances, 70.85 per cent.; solid organic substances, 28.97 per cent., and mineral substances, 0.18 per cent. The Trinity tar contains 21 to 30 per cent. of water and 88 per cent. of ashes. Mau- jak is thus rich in bitumen, and it would seem possible to utilize it as a varnish, and as a combustible when used with peat. Its insulating properties would also suggest its use as a substitute for gutta percha in electrical insulation.

A Spanish peach is now equivalent to about 15 cents in gold.
