THE SILK CULTURE. Great Silk Meeting at Highfield Cocc

Germantown.

Agreeably to a resolution passed at the last stated meeting of the Philadelphia County Silk Society, a special meeting of the Society convened at Highfield Cocoonery, Germantown, on Thursday, 22d Aug., to which the friends of the silk business and the public generally were invited. About five hundred of the most re- specimen of American ingenuity.

to put to rest the doubt and fear expressed of mittee that they have never seen better produread several certificates from the principal tailors in Philadelphia, expressive of their opinion, on a trial, of the character of sewing silk produced by worms fed on the leaf of this tree in this cocoonery. He exhibited at the same time, parison, superior to other hanks also reeled here, specimens of the silk, and also specimens of which were produced from the worms fed upon and the superiority of our own, in every essen duced from the multicaulis, and it is the opinion tial particular, was evident to the most casual of the committee that they have never seen Itaand the superiority of our own, in every essen observer. These certificates will be found annexed, together with his letter to Matthew Ca.

When it is remembered that the silk exhibited nexed, together with his letter to Matthew Ca--to the truth of the statements of

There was, however, not one dissenting voice.

Mr. Leeds, of Philadelphia, spoke of the efforts of speculators, who were strenuously exertic, and are now feeding, from Mr. Physick's but their Godf

You will no doubt admit that there are many silk, when the trees have attained 4 years or the inevitable ruin which would certainly the eye can scarcely observe that the trees have a strength of the world are the inevitable ruin which would certainly the eye can scarcely observe that the trees have attained 4 years or the inevitable ruin which would certainly the eye can scarcely observe that the trees have attained 4 years or the inevitable ruin which would certainly the eye can scarcely observe that the trees have attained 4 years or the inevitable ruin which would certainly the eye can scarcely observe that the trees have attained 4 years or the inevitable ruin which would certainly the eye can scarcely observe that the trees have attained 4 years or the inevitable ruin which would certainly the eye can scarcely observe that the trees have attained 4 years or the inevitable ruin which would certainly the eye can scarcely observe that the trees have attained 4 years or the inevitable ruin which would certainly the eye can scarcely observe that the trees have attained 4 years or the inevitable ruin which would give \$67,699 80 from 60 a whom that labor would be a boon indeed, that overtake them, in the event of not succeeding been desoliated. in their efforts, from the imprudent contracts
In the spring to furMorus Multicaulis as a food for silk worms, and holds forth this desideratum in such bold relief multicaulis planted that season, the enormous entered into by them early in the spring to lur-t morus multicaulis as a lood for silk worms, and nish immense quantities of trees at 12½ cents are of opinion that the producing of silk by its each, which they were now unable to fill, except at an advance of at least from 100 to 150 tive branch of agricultural industry, and well per cent. Mr. L. also stated his wish to pur-tive for the purity of the crippled and profitably employed without caus-tively and profitably employed without causchase, for immediate use, ten or fifteen bushels nia farmer. of cocoons from worms fed exclusively on the Morus Multicaulis, and to continue the daily ex-hibition of Mr. Brooks's patent silk machine

K. SPENCER. ibition of Mr. Brooks's patent silk machine at his establishment No. 2, Franklin Place. He justly contended that nothing would carry con-viction to the public mind, with the same force, as these exhibitions. People wanted to see for hemselves-and seeing would be believing. He also announced that he was ready to purchase,

at a liberal price for cash, from one to ten thous

and bushels of cocoons.

Mr. Pierce, of Mount Airy, who has been engaged in the silk business for the last eight years, on the white mulberry, remarked that, al to any we have ever seen in our lives, with rethough he had hitherto doubts, strong doubts of gard to strength, gloss, and texture. the adaptation of the Morus Multicaulistree to the production of silk, yet he was new convinced from experience that this was the food for the silk-worm, and so firmly was he of this opinion that he designed the ensuing spring to plant one hundred acres with the Morus Multicaulis, to go into the cultivation of silk on an extensive scale and was now making preparations to manufac-ture silk cloths for his umbrella establishment in Philadelphia. Mr. P. also imparted some very valuable information relative to his mode of pro serving the egg until the time of hatching, which was this. The eggs were removed to a cool cellar ing laid; when the cold weather came on, they were placed in a room without fire, and kept there through the winter; they were then rolled up and put into a confectioner's show bottle, corked up and, and the cork being slightly sunl below the top of the bottle, the cavity was filled up with melted rosin, &c. entirely excluding the air. The bottle was then put into a small keg, filled round with shavings, and after being head ed up, was placed in the ice-house until wanted. Mr. P. said that scarcely an egg failed in hatch.

ing, and healthier worms he had seen nowhere. Mr. Ellis, of New Jersey, remarked that to much care could not be observed in the purchase of eggs, he having been most wofully deceived in the supply which he had bought for himself. Out of the thirty ounces, scarcely any hatched; and as they were all or principally New Eng land eggs, he had come to the conclusion that the Yankees did not make good eggs. There have, no doubt, been many similar failures, but (said Mr. E.) as there will be a large supply in he market of this year's produce, there will be no difficulty, if the eggs be purchased from the producers, of obtaining healthy ones. Mr. E. also stated that he had built a cocoonery this summer, 25 by 60 feet, calculated to feed three millions of worms, for twelve hundred dollars; and if the principle of economy, observed in the construction of this building were applied to

The meeting was also very appropriately an consibily addressed by Meetra. Kineman an sensibily addressed by Mesers. Kinsman and Buckley, of Philadelphia, and Mr. Comfort, of Byberry. After which the report was adepted, and ordered, with the accompanying certificates

Mr. Gay, the inventor of the celebrated silk reeling and spinning machine, was present with his apparatus, which was put in operation by steam, to the delight and gratification of the hundreds in attendance. Mr. Gay's machine converts the fibre from the cocoon into sewing silk, by a single operation, and is a splendid

the on the occasion, the deep interest they fett in the subject which drow them together.

The committee appointed at the preceding meeting of the Society, to collect facts connected with the silk business, and report the same at each meeting of the Society, made their report through their chairman, Mr. Pierce, which being read and open to discussion, the whole subject was taken up, and much valuable information elicited from the remarks of the different gentlemen who addressed the Society.

Mr. Physick stated, among other things, the Morus Multicaulis. The worms are, and the Morus Multicaulis tree. And in order forever to put to rest the doubt and fear expressed of mittee that they have never seen better producing through the subject; and find that a large number of silk worms of the subject; but, inasmuch as the little good he he various kinds have been fed during the present subject; but, inasmuch as the little good he he various kinds have been fed during the present subject; but, inasmuch as the little good he he various kinds have been fed during the present subject; but, inasmuch as the little good he he various kinds have been fed during the present subject; but, inasmuch as the little good he he various kinds have been fed during the present subject; but, inasmuch as the little good he he various kinds have been fed during the present subject; but, inasmuch as the little good he he various kinds have been fed during the present subject; but, inasmuch as the little good he he various kinds have been fed during the present subject; but, inasmuch as the little good he he various kinds have been fed during the present subject; but, inasmuch as the little good he he various kinds have been fed during the present subject; but, inasmuch as the little good he he various diverse are two hopes has been accomplished, partly by his heart subject; but, inasmuch as the little good he heart subject; but, inasmuch as the little good he he various di the very best Italian, from the white mulberry, the white mulberry.
